RADIANT LOGIC

Identity for Healthcare

Identity Clarity for Patient Safety, Zero Trust, and Operational Resilience

Healthcare organizations face mounting challenges that directly impact patient safety, operational continuity, and financial performance. Fragmented human and non-human identities across Electronic Health Records (EHRs), HR systems, Internet of Medical Things (IoMT), and partner ecosystems create blind spots that attackers exploit and clinicians struggle with daily.

RadiantOne Identity Data Cloud is an Identity Visibility and Intelligence Platform that allows healthcare providers and payers to see, understand, and act on identity risk in real time.

By establishing a single source of identity truth, RadiantOne helps organizations:

- **Unify** fragmented identity profiles across complex environments — including seamless integration with EHR platforms like Epic — without disrupting clinical workflows or claims processing.

- **Observe** identity activity to surface risks and anomalies in real time.

- **Act** and remediate those risks with guided, AI-driven actions.

RadiantOne Identity Data Cloud

CENTRALIZED PLATFORM TRANSFORMING FRAGMENTED HUMAN AND NON-HUMAN IDENTITY DATA FROM A MAJOR RISK INTO A VALUABLE BUSINESS ASSET

ACT: PROACTIVE REMEDIATION IN REAL TIME

OBSERVE: ANALYTICS & AI-POWERED INTELLIGENCE

UNIFY: DATA UNIFICATION ACROSS ALL SOURCES

IMPROVE RESILIENCE ACROSS THE IDENTITY ECOSYSTEM

ACCELERATE BUSINESS OPERATIONS & AGILITY

MITIGATE RISK & ENSURE CONTINUOUS COMPLIANCE

Electronic Health Reports | Legacy Apps | LDAP Directory | Databases | Cloud Apps | HR Platforms | APIs | SCIM Platform

Benefits for Healthcare Providers

Improved Patient Safety & Uptime
Reduce clinical access delays and downtime caused by identity failures, ensuring immediate access to critical care apps.

M&A Agility
Rapidly integrate new hospital networks without the need to establish trust or share administration between complex AD environments.

Clinical Efficiency
Streamline clinician onboarding and support complex "bedside" workflows (e.g., tap-badges, roaming sessions).
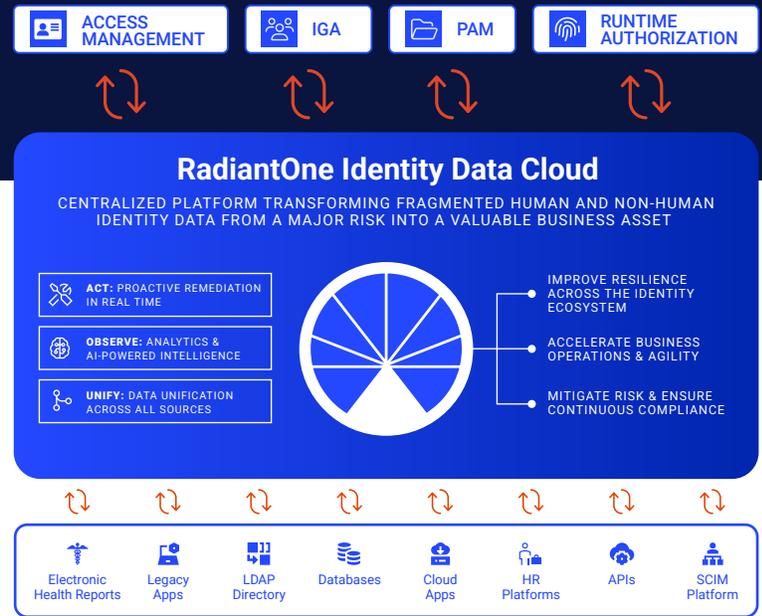

Benefits for Payers

Fraud Reduction
Reduce fraud vectors by consolidating member, broker, and provider identities into a single trusted layer.

Claims Integrity
Lower claim denial rates by ensuring member identities and coverages are consistent across claims platforms (e.g., Facets, QNXT) and portals.

Member Experience
Enhance portal uptime and login success rates, directly improving Net Promoter Scores (NPS).

"Provisioning tools come and go, but the real foundation is identity data. RadiantOne made everything else easier."

AdventHealth

The RadiantOne Approach: Unify, Observe, and Act

RadiantOne delivers identity visibility and intelligence that is purpose-built for the high-stakes healthcare environment.

Unify: A Single Source of Truth

Aggregates, correlates, unifies, and synchronizes identity data across numerous disparate sources, providing a foundational single source truth that powers your IAM program.

RadiantOne functions as an intelligent identity hub, virtualizing and correlating data from across the infrastructure without requiring a rip-and-replace of existing systems.

- **Clinical Integration:** Unify user profiles across major EHR platforms like Epic, Oracle Health, and Meditech, as well as HRIS and credentialing systems.

- **Member Portals:** connect member profiles across claims platforms, CRM, policy admin systems, and customer portals.

- **M&A Readiness:** Achieve "Day One" readiness by virtualizing identities from acquired entities (AD, LDAP, SQL, APIs), allowing immediate cross-domain access without complex domain consolidations.

- **Multi-Persona Resolution:** Clean and correlate identities for clinicians who may have multiple roles (e.g., surgeon, professor, researcher) to ensure accurate access provisioning.

Observe: Continuous Visibility and Context

Move from periodic audits to real-time observability. RadiantOne provides a 360-degree view of the identity fabric.

- **Drift Detection:** Monitor contextual drift across HR, credentialing, and access systems to catch anomalies before they become breaches.

- **Non-Human Identities (NHI):** Gain visibility into the "silent majority" of the network — service accounts, bots, APIs, and IoMT devices — that often evade standard governance.

Act: Automated Remediation

Turn intelligence into action by orchestrating remediation across the IAM stack.

- **Orphaned Account:** Automate the detection and removal of stale accounts across Epic, Oracle, and Active Directory to close security gaps.

- **Zero Trust Enforcement:** Enable dynamic authorization for clinical automation and AI agents, ensuring least privilege is always maintained.

Regulatory Alignment

RadiantOne creates the identity data fabric required to meet stringent US healthcare regulations:

Regulation	RadiantOne Impact
HIPAA	Enables enforcement of "minimum necessary" access and simplifies audit readiness by creating a unified view of who has access to PHI.
HITECH	Facilitates secure interoperability and electronic data exchange between providers and payers by reconciling identities across disparate EHRs.
HHS 405(d)	Supports the "Health Industry Cybersecurity Practices" (HICP) by centralizing identity management to prevent ransomware and account takeovers.
CMS Interoperability	Provides the identity backbone behind FHIR APIs, ensuring secure data sharing and patient access compliance.

Radiant Logic, the leader in Identity Security Posture Management (ISPM), empowers complex enterprises to ensure a more resilient identity ecosystem and prevent security breaches.

Trusted by the world's largest commercial and government organizations, we help accelerate identity-first security strategies by reducing the attack surface, ensuring continuous compliance, and driving digital transformation.
